

Stitch-symbol legibility test

47 glyphs · interleaved assignment · A4 · 2026-07-23

1 · Check the scale before you read anything

Print at 100% / Actual Size — not "fit to page", not "shrink oversized pages". Then measure the bar below with a ruler. It must be exactly 100 mm. If it is not, the print was rescaled and every judgement on the following pages is void, because this whole test is an argument about physical millimetres.

2 · If the bar is short — the usual cause, and the fix

This PDF is A4. If your printer is loaded with (or set to) a different paper size, the viewer silently fits the page to the paper even on "Actual Size". Fitting A4 onto US Letter shrinks everything to 93.9%, which lands this bar at about 94 mm — the single most likely explanation for a short bar.

Fix 1, preferred — regenerate at your actual paper size: `npm run uat:legibility -- --letter`

Fix 2, fallback — pre-compensate for whatever the scaling is. Divide 100 by the length you measured and pass it back. Measured 94 mm? Run: `npm run uat:legibility -- --scale=1.0638` Then print again and re-measure: the bar should now be 100 mm.

3 · The scale that actually matters

Not the fabric's. A chart is read at whatever size its grid lands on the page: a 72-cell Wesnoth sprite across this page's printable width gives cells of about 2.36 mm, putting each glyph at roughly 4.8 pt. That is the row to judge on page 2, and the size the real charts on pages 5–6 are drawn at. The sheet brackets it either side so you can see which way it fails.

4 · How to record your answers

Page 2 is a reference — just look. Page 3 is the drill: tick "same" only if you cannot tell the pair apart without comparing them side by side. Page 4 is a blind test — write what you see and do not turn to the key on page 7 until you are done. Pages 5–6 are real charts. Anything that reads as the same glyph gets removed from the set, and the colour cap drops by one for each: the two numbers are the same number.

Page 2 · All 47 glyphs, at four cell sizes

In chart order (most distinctive first). Glyph height is $0.72 \times$ the cell, exactly as the app draws it. Look for any glyph that stops being itself as the cells shrink.

1.81 mm 14-count Aida — the stitched size itself. Deliberately unfair.

●■▲◆◇□△◇☆●+×#|=A|B|C|D|E|F|G|H|I|J|K|L|M|N|P|R|S|T|U|V|W|Y|Z|♥|♣|♠|†|‡|§|¶|3|4|7|

2.12 mm an 80-cell chart across the page

●■▲◆◇□△◇☆●+×#|=A|B|C|D|E|F|G|H|I|J|K|L|M|N|P|R|S|T|U|V|W|Y|Z|♥|♣|♠|†|‡|§|¶|3|4|7|

2.36 mm a 72-cell sprite across the page — THE REAL CASE

●■▲◆◇□△◇☆●+×#|=A|B|C|D|E|F|G|H|I|J|K|L|M|N|P|R|S|T|U|V|W|Y|Z|♥|♣|♠|†|‡|§|¶|3|4|7|

3.00 mm a chart given more room

●■▲◆◇□△◇☆●+×#|=A|B|C|D|E|F|G|H|I|J|K|L|M|N|P|R|S|T|U|V|W|Y|Z|♥|♣|♠|†|‡|§|¶|3|4|7|

The same set again, in one block, to judge as a field:

●■▲◆◇□△◇☆●+×#|=A|B|C|D|E|F|G|H|I|J|K|L|M|N|P|R|S|T|U|V|W|Y|Z|♥|♣|♠|†|‡|§|¶|3|4|7|

If that block reads as texture rather than as symbols, the set is too large or too subtle — which is a finding in itself, and belongs on #30 rather than #28.

Page 3 · The confusion drill

Each pair adjacent at three sizes, then separated by three other glyphs — which is how a chart actually presents them; you rarely get to compare side by side. Tick "same" only if you cannot reliably tell them apart at 2.36 mm.

pair	1.81	2.36	3.00	separated, 2.36 verdict at 2.36		
C / G					☐ same	☐ distinct
marginal (§5.3) — passed						
E / F					☐ same	☐ distinct
marginal (§5.3) — passed						
P / R					☐ same	☐ distinct
marginal (§5.3) — passed						
♦ / ◆					☐ same	☐ distinct
DROPPED ◆ — indistinct, kept ♦						
♠ / ▲					☐ same	☐ distinct
passed — both kept						
▣ / ■					☐ same	☐ distinct
DROPPED ■ — fill vs solid						
▣ / □					☐ same	☐ distinct
DROPPED ■ — fill vs outline						
† / ‡					☐ same	☐ distinct
print marks — passed						
§ / ¶					☐ same	☐ distinct
print marks — passed						
♣ / ♠					☐ same	☐ distinct
suits — passed						
3 / B					☐ same	☐ distinct
digit vs letter — passed						
7 / T					☐ same	☐ distinct
digit vs letter — passed						
4 / A					☐ same	☐ distinct
digit vs letter — passed						
● / ◆					☐ same	☐ distinct
control						
○ / ◇					☐ same	☐ distinct
control						
+ / ×					☐ same	☐ distinct
control						
◐ / ●					☐ same	☐ distinct
control						

Any pair you ticked "same": name it here. Each glyph removed lowers the colour cap by one.

Page 4 · Blind identification

Write the glyph you see — draw it, or name it ("solid circle", "capital G"). Do not look at the key on page 7 first. Errors here matter more than the drill above: this is the task a stitcher actually performs.

Real chart · dwarves/scout.png

72x72 stitches · k = 20 floss (reduced from 30) · 2.36 mm cells · interleaved assignment. A typical sprite, comfortably under the cap. Read it as you would stitch it: can you follow a row without losing your place, and can you tell every symbol apart?

Real chart · merfolk/citizen.png

72×72 stitches · k = 47 floss (reduced from 95) · 2.36 mm cells · interleaved assignment. The richest sprite in the checkout — reduced to the cap. This is the hard case. Read it as you would stitch it: can you follow a row without losing your place, and can you tell every symbol apart?
